Idzharul Huda

Analytics and Reporting Lead - Data Platform

Jakarta, Indonesia | hello@idzharulhuda.com | linkedin.com/in/idzharulhuda | github.com/idzharulhuda13 | idzharulhuda.com

SUMMARY

Analytics and Reporting Lead at Rey.id, owning the batch analytics platform behind client reporting: 25 ingestion pipelines, 599 dbt models and 908 automated data tests, with 2.7 TB of storage and 3.5 TB scanned a day entirely on-demand. Four years in analytics engineering across health-tech, agri-tech and public-sector data.

EXPERIENCE

Analytics and Reporting Lead

Rey.id - Jakarta, Indonesia | Aug 2026 - Present

- Lead the analytics and reporting function and own the batch analytics platform behind client reporting.
- Run 25 ingestion pipelines (21 hourly, 121 tables, about 2,900 table loads a day) landing into BigQuery through Cloud Storage with a change-set merge and a 2-hour look-back window.
- Maintain 599 dbt models and 908 automated data tests; 233 models rebuild hourly, 124 daily, all transformation as SQL inside the warehouse, run from git through GitHub Actions.
- Added a daily completeness check that compares what each pipeline claims it built against what BigQuery actually changed, so a job that reports success while writing nothing is caught.
- Keep the platform fully on-demand - 3.5 TB scanned a day (about 105 TB a month) - and deliver client reports as staged files over SFTP or email with per-contract password archives.

Data Analyst (Analytics Engineer)

Rey.id - Jakarta, Indonesia | Aug 2022 - Aug 2026

- Optimized a key datamart model to run 9x faster, cutting BigQuery slot time by 96% and data shuffled by 58%, contributing to a 30% gain in overall pipeline efficiency.
- Raised report accuracy from 82% to 95% by automating insurance claim workflows with dynamic master mapping.
- Migrated reporting from Google Sheets to BigQuery with dbt, moving report generation from daily to hourly and enabling 40+ stakeholders to self-serve.
- Built end-to-end data quality checks and automated discrepancy detection, cutting manual error resolution by 50%, and enforced ISO 27001:2022-aligned data handling.
- Enforced personal-data controls in the platform itself: column-level policy tags on name, email, contact number, address, ID and financial fields, 29 tagged models, and a Dataplex catalogue of 776 tables and 1,473 relationships that blocks personal data from readers without clearance.

Data Analyst

Rize Farm - Jakarta, Indonesia | Jul 2026 - Aug 2026

- Built an hourly multi-source sync that pulls eight analytics cards into a single reporting workbook, with the SQL for every card version-controlled in the repository.
- Added a divergence layer that freezes closed weeks and records only real changes, retiring thousands of rows of already-known state that each run used to rewrite.
- Shipped a read-only Apps Script dashboard for weekly per-person and per-team incentive metrics, with a diagnostics panel that reports a missing or renamed column instead of returning silent zeros.
- Moved all aggregation into the workbook so the app only renders, and migrated a card that outgrew the query endpoint row cap onto a full export with a written runbook.

Data Analyst
Ministry of Education and Culture, Republic of Indonesia - Jakarta, Indonesia | Nov 2023 - Nov 2024

- Led statistical analysis with Winsteps Rasch modeling to improve the accuracy of student talent and interest categorization.
- Built a multi-level difficulty assessment pipeline in Python for nationwide student fitness assessments, and standardized the evaluation norms adopted in the national feasibility study.
- Authored replicable project documentation so the method could be re-run by the next team.

AI Engineer
Olvo.ai - Hong Kong, China (Remote) | Apr 2024 - Jan 2025

- Digitized thousands of hardcopy documents into structured datasets with OCR, YOLO and GPT-4, improving document handling efficiency by 70%.
- Designed an LLM embedding system to standardize hospital formularies across institutions, and automated claims verification and pricing audits, cutting manual review by 60%.
- Built a real-time client demo with Streamlit for the client evaluation.

EDUCATION

Bachelor of Computer Science
Sebelas Maret University - Surakarta, Indonesia | Aug 2018 - Mar 2022

Coursework in programming, software development and problem solving; thesis on automated essay scoring (deep learning with Word2Vec and TensorFlow, 91.23% kappa on the Kaggle Hewlett Foundation dataset).

SELECTED PROJECTS

Dataverse - Conversational Analytics
Public repository | github.com/idzharulhuda13/dataverse

- Multi-agent app that answers questions over uploaded CSV, Excel and Parquet datasets: cleaning, enrichment, SQL generation and visualization specialists with 191 commits shipped.

Automated Essay Scoring (thesis)
Python, Word2Vec, TensorFlow | 2022

- Trained a deep learning scorer on roughly 1,700 essay samples and reached a 91.23% kappa score on the Kaggle Hewlett Foundation dataset.

Telehealth Cost-Effectiveness Study
Published research | 2023

- Showed telehealth-powered managed care was 7x more cost-effective than conventional care for acute respiratory infection.

CERTIFICATIONS

- Google Data Analytics Professional Certificate
- Microsoft Technology Associate: Database Fundamentals

SKILLS

Data platform: SQL, dbt, BigQuery, Airflow (self-hosted on Kubernetes), Cloud Storage, GitHub Actions
BI and reporting: Looker Studio, Metabase, Google Sheets, Excel
Programming: Python, Google Apps Script, Streamlit, Git
Analysis: Winsteps Rasch modeling, statistical analysis, data quality testing
